

Lastation NepOS

Ready to Power your Business

NepOS includes solutions for key business needs, such as:

- E-mail and spam filtering
- high-performance web application hosting
- firewalling
- directory services (LDAP)

Overview

NepOS is the ideal foundation for your business. Whether it is deployed for a web-scale platform-as-a-service (PaaS) solution in the cloud, as high-performance server for your critical internal business communications or just a single central backoffice server, NepOS can handle any load.

Unrivalled Security

NepOS is built with security in mind. Some highlights include:

- *Exploit mitigations.* NepOS employs many of today's common mitigations against software exploitations, such as address space layout randomization (ASLR) and stack canaries.
- *Security auditing.* NepOS is carefully being audited as a whole. Every piece of the system is thoroughly checked for security vulnerabilities before it is shipped – it is software hand-crafted with the greatest care possible.

Familiar

NepOS will feel very familiar to experienced UNIX® or Linux® system administrators. They can get used to NepOS in minimal time.

You will incur at most minimal losses in transitioning from any UNIX or Linux system to NepOS.

What's in NepOS?

NepOS is the NepOS base system plus a digital rights management (DRM) framework for managing NepOS licensing.

No support is provided. No warranties are included. No maintenance is provided.

Lastation NepOS

Ready to Power your Business

NepOS makes it easy to save costs in license management alone.

Cost-Effective Licensing

NepOS is affordable, in more than one way:

- *Simple licensing.* One license, one motherboard, unlimited updates. It really is this easy.
- *Do more with less.* Because NepOS includes turnkey solutions for many scenarios, you can replace your datacenter running dozens of different Linux operating systems with a single operating system: NepOS.

Licensing Details

- *Business Licenses.* Whether your business makes billions of dollars a year or whether your business is located in your garage, we offer a single solution that you can afford.
- *Non-profit Licenses.* Non-profit organizations, regardless of whether they are large charity organizations or an informal group running a small web forum, are eligible for licenses sold at a low, symbolic price.
- *Hobbyist Licenses.* We understand that there are hobbyists and that some of them will go on to become future NepOS system administrators. Therefore, we offer hobbyist licenses free of charge. If you can generate a valid license key, the version you have generated it for is yours for life for non-commercial purposes. Sales will be happy to confirm your license key and, at your request, issue a PDF certificate for your license.
